**Fruits that have supported spotted wing drosophila**

List includes wild, ornamental, and other crop hosts besides blackberry, blueberry, cherry, grapes, raspberry, and strawberry. See reference list (other pdf) for scientific names of plant species, documentation for each species, and where fruits were infested as regional differences may occur.

</tbody>
</table>

1 Fruiting period may include the period past ripeness where fruit still remains on the plant and is still susceptible to the pest.

.lab Indicates the record is from a lab study

.postharvest Hardy kiwi is harvested while still hard, the soft ripe stage was found susceptible

Reports of spotted wing drosophila among damaged fruit
